

PDASP2SA2 is a complete solution dedicated to 2-way or 3-way self-powered loudspeakers. Designed to meet different applications, it provides 2.1 channels with output power of 900W+500W+500W @4Ω. In addition it offers a full set of value adding features such as on board DSP. To guarantee maximum reliability, the **PDASP2SA2** includes a highly efficient switch mode power supply with PFC (Power Factor Correction) which provides power to the 2.1 output channels. The output stages use the well-known Pascal SPRO2+S-A2 Class D module - full bandwidth PWM modulator obtaining ultra low distortion, high dynamic range and also equipped with a full set of circuit protections. The **PDASP2SA2** includes a set of sophisticated

processes for loudspeaker, implemented by the powerful M704 DSP running 96kHz/24bit [96 bits precision for the internal intermediate processes]. Processes as Noise Gate, crossover filters, parametric EQs per input and output sections, alignment delay, all in all everything needed to optimize a self-powered loudspeaker. Moreover the Clip function per channel provides output monitoring to prevent speaker damage with gentle gain reduction at clip threshold, in addition to the efficient heat dissipation system and Over-Heat protection which themselves ensure uncompromised reliability. All setup parameters for input mixing, DSP features and the limiter setting are accessible by using the remote PC software.
